DETAILED ACTION

Claims 1-33 are pending. Claims 17-33 are considered on the merits. Claims 1-16 are withdrawn from consideration as being drawn to a non-elected invention.

Election/Restriction

Claims 1-16 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b) as being drawn to a non-elected invention. Election was made without traverse in Paper No. 6.

Claim Rejections - 35 USC § 112

INDEFINITE

Claims 17-33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 17 and 23 recite the inclusion of potassium, calcium and magnesium in the solution. Potassium, calcium and magnesium are metals. It is unlikely that a lump of magnesium is added to the solution. Rather, it is more likely that potassium, calcium and magnesium IONS are intended.

Claims 18 and 25, line 4, and claim 25 line 4 "agent" is misspelled.

Claim 21 recites "selected from the group consisting of dextrose, glucose and mixtures thereof."

Glucose and dextrose are synonyms, that is, they are the same compound, see Merck Index 4353 [U]. Thus, the claim is incorrect and confusing.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action: A person shall be entitled to a patent unless (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent, (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States before the invention thereof by the applicant for patent.

Art Unit: 1651

Claims 17, 18, 21 and 22 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Turpin *et al.* [V] in view of Dobrian *et al.* [W] or Birkett *et al.* [X] or Watanabe *et al.* [Z]. *signature*

The claims are directed to a composition comprising:

- (1) a metabolizable carbohydrate (glucose),
 - (2) sodium chloride,
 - (3) potassium (ion),
 - (4) calcium (ion),
 - (5) magnesium (ion),
 - (6) bicarbonate ion,
 - (7) epinephrin(e)
 - (8) adenosine
- free of non-metabolizable impermeants
pH about 7.4-8.5

The references are relied upon as explained below.

Turpin *et al.* discloses a composition comprising Krebs-Ringer bicarbonate buffer with 1.5% albumin at pH 7.4 (page 443, methods) to which has been added 0.3 μ M epinephrine plus adenosine 0.1 μ M (legend Fig. 4). Albumin is a cytoprotective agent as demonstrated by its antioxidative properties (Dobrian *et al.*) and is well know to have fatty acids and steroids associated with it (Birkett *et al.* and Watanabe *et al.*).

Thus, the composition of Turpin *et al.* which comprises albumin would also contain antioxidant, steroid and fatty acid by virtue of the fact that albumin preparations contain steroid and fatty acid and exhibit antioxidative properties.

Claims 19, 20, 23-33 appear to be free of the art.
